SOUTH AMERICA, LIMITED

NICARAGUA: TRADE ROUTES,
RAILROAD ENTERPRISE, COFFEE AND RUBBER INDUSTRIES, ETC.

The thickest-settled parts of Nicara-gua lie on the Pacific, and civilization does not reach, on an average, much further inland than about 100 miles from the coast as the crow flies. The real business of the country is mainly limited, business of the country is mainly limited, therefore, to a narrow belt on the Pacific coast, where some wealth and industry concentrate. Beyond this roo-mile belt, the country is not even properly explored; in fact, in many places the limit of roo miles spoken of will, one conservation, be found to be exaggerated.

The country has had given it discovered.

The country has had, since it discovery by the Spaniards, two outlets for the traffic with the world-Realejo of old, now Corinto, on the Pacific, and San Juan del Norte, on the Atlantic

As the conquest by the Spaniards, four hundred years ago, was made, creeping up the coast from Panama toward the north in this part of the continent, they stopped for a while at the large lake of Nicaragua and founded the town of Granada, near the old aboriginal place called Talteba. It was soon found that Granada had facilities of communication Granada had facilities of communication with the Atlantic by means of the lake and San Juan river, making it thereby independent of the route via the Isthmus of Panama, by which the conquerors originally came. San Juan del Nortei was founded, and this highway made Grahada one of the most important towns of old. Furthermore, it was found that the lands toward Rivas were good for eattle breeding and for the production of indigo and chocolate; the duction of indigo and chocolate; country to the north and northeast pro-duced, besides, cattle and gold, and civiligation took a firm foothold at Granada and around the upper half of Lake Ni-calagua. Near to Granada there were many native villages and towns, which absorbed

were absorbed.

yushing northwest, there was found,
again, a large tract of good land beyond
the upper or Managua lake, which was
overrun by the Spaniards, and the town
of Leon was founded there, as a second
center of Spanish government and enterprise. Leon's natural outlet for its commerce with the world is, and was, on the Pacific only, via Realejo, now Corinto; and even in ancient times, there was much tivalry between the two centers of the Spanish dominion—one established, at Granada and the other at

Granada had the communication by water with the world at large, and was not subject to the barrier of the Isthmus not subject to the barrier of the Isthmus and the control or supervision which existed for the trade of Leon at Panama. Granada could help her business, also, by some smuggling with the bnecaneers and with the Dutch and English traders who were established on the Atlantic coast and in the minor islands of the Antilles. This condition of things brought about the first, but faint and unsuccessful, attempt at independence of the mother country (Spain) in Leon in the year 1549, long before any other people living on American soil ventured to take this step. In the first half of this century, the history of Nicaragua consists only of unceasing party strifes, toward which the inveterate jealousy of the two rival districts, Leon and Grathe two rival districts, Leon and Gra-nada, contributed the chief or only catise

After Walker's defeat in 1856, and after the country was completely pros-trated, Leon and Granada agreed to have trated, Leon and Granada agreed to have the capital of the country, which was aimed before for either one of the two cities, shifted about halfway from both, to Managua Managua was then almost nothing better than a village, but in time nothing better than a village, but in time improved, and when it was found that coffee would grow and produce very well in the hills which are to the south and southwest of the town, the people of Managua and some enterprising natives of Granada, and, later on, also of Leon, took advantage of it and went into coffee planting. At present, on a space of about 36 miles long by to miles wide,

nearly all in coffee, a crop of nearly 150,nearly all in coffee, a crop of nearly 150,000 bags, of 125 pounds each, is raised in
good years and shipped for export. On
an average, the yearly net profit to the
country and district can not fall much
short of 3,000,000 silver soles in this
industry alone, which, for a country
otherwise poor and for settlements which
might be said to contain 50,000 inhabitants only, is a fair showing.

Soon after the Colon Panama railroad
was finished, the old transit route of Nicaragna, via San Juan del Norte. Virgin

caragna, via San Juan del Norte, Virgin Bay, Rivas, and San Juan del Sur, was abandoned by Vanderbilt, and the route would have gone out of existence alto-gether had not Granada had a vital ingerner had no crantated acta viter in-terest in a part of it on account of her trade. This line, consisting of lake and river steamers, fell, about twenty years ago, into the hands of Mr. Pellas, who rean it in such an unsatisfactory way, with regard to the public interest, that Graran this such an unsuds actory way, which regard to the public interest, that Granada, which then controlled the government of the country, induced the latter to build a railroad from Corinto to Managua, to put steamers on the lake of Managua, and to build a further railroad from Managua to Granada. These lines connected Granada, Masaya, Ma-nagua, Leon, and Chinandega, the the most important towns of the try, with Corinto, on the Pacific. try, with Corinto, on the Pacific. Thus, they had a speedy and secure service and were independent of Mr. Pellas and the river route. The bulk of goods leaving and coming into the country, therefore, was and is carried via Corinto and Panama, since the establishment of this Panama since the establishment of this new highway Cranada, with the command of the trade uear and about the great lake, does little business by way of the river; the bulk of her business goes through Cojinto. The trade of Leon is carried on also through Corinto, cui-bracing, besides, that of Ocotal, Tinotega, and Matagalpa, to the north and poortheast. northeast.

The new communication by railroad and steamers, the gradual increase of the output of coffee—from about 30,000 bags in 1876 to over 150,000 bags in 1895—made of Managua a new center of commerce in the country. Granada wanted a quick and secure route for its trade in place of the constant difficulties of the river route, but for the very reason that Granada is located at the tail end of the line, she helped to develop the section of the country above, and trade remained at its best only stationary with her. To The new communication by railroad at its best only stationary with her. To her dismay, Leon, which has better land

her dismay, Leon, which has better land for agriculture, was gaining in importance every day; Managna, on account of its coffee, showed some signs of becoming a rival to both Leon and Granada.

To these circumstances, the revolution against President Sacaza three years ago, might be attributed. Granada won for a few weeks, but not having stamma enough, soon lost the day, and Leon, in combination with Managna, gained the upper hand. On the 24th of February of the current year, Leon tried to get absolute supremacy in public affairs, but the uprising was disastrous for her, and the country is now in the hands of

the uprising was disastrous for her, and the country is now in the hands of Managua and Masaya people, Granada having very little, if anything, to say. In the matter of railroads, there was built a short branch of 4 miles from Chinandega to Viejo, a year ago, and there is actually building a railroad from Massaya to Catarina, Diriamba, etc., about 26 miles, so as to tap the Pueblos coffee district, which joins the Managua plantations. Nicaragua wishes to fill the gap on her main line by joining the two sections existing, so that there would be a continuous line from Corinto to Granada, which undoubtedly would be of great advantage. great advantage.

great advantage.

Toward the Atlantic, two lines are projected, one to the Rio Grande and another to the Rama rivers, where they are navigable. These two projects show that the country is desirous of getting an easy communication to the Atlantic, without being subject to the roundabout way via Panama. It is the same old ten-dency which has existed since the coun-

In the line of custom-houses on the Atlantic coast, there are established by Nicaragua, Cape Gracias-4-Dios, Blue-

fields, and San Juan del Norte, all of

fields, and San Juan del Norte, all of local importance only.

Goods entering the country by the Atlantic lave to pass the custom-house Castillo, an old castle on the San Juan river built by the Spaniards.

The business transacted now from the Atlantic coast it attended to by Consul O'Hara in San Juan del Norte, and the records will show that it is small, considering the great extent of country behind it. The route San Juan del Norte to Granada has been given up these many years for the bulk of trade and transportation, as stated above; nearly all the export and import trade of Nicaragua finds its way via the Pacific.

San Juan del Sur is the port for the local trade of Rivas, Corinto absorbing about 75 per cent of the whole of the trade of Nicaragua. At Son Juan del Sur and Corinto are Nicaragua custom-houses and United States consular agents.

Managua as the capital was already.

Managua, as the capital, was already prominent, but gradually becomes more and more independent of Granada and Leon. These two towns, which formerly

Leon. These two towns, which formerly supplied all kinds of commodities, was beaten by Managua's coffee production and direct trading with the world.

Quite different is it with another district of Nicaragua, which, in a short time, will be one of the most flourishing in the republic on account of the coffee industry, as there are large extres build-

in the republic on account of the coffee industry, as there are large estates building up at Matagalpa devoted to the growth of coffee, chiefly by the money and enterprise of American citizens.

Coffee grows in Nicaragua to perfection at an elevation of about and above 2,000 feet; it can go down to 1,000 feet, or even 800 feet, and will grow very well up to 3,000 feet, but at 4,000 feet above the sea it will not thrive.

The high prices of coffee ruling in the world's markets are developing many new districts in Nicaragua besides Managua and the Pueblos, because in these

new districts in Nicaragua besides Managua and the Pueblos, because in these localities good land, fit for coffee planting, has been all taken up. As the plant will grow best in the hills or hilly countries, elevation in sought for—uear Granada, on the volcano Mombacho; near Leon, Chinandega, and Posoltega; in Cheatales, near Livingha. Linfortunnear Leon, Chinandega, and Posoltega; in Chontales, uear Juigalpa. Unfortunately, there is not in these places land enough, with regard to proper elevation above sea level. At Matagalpa and Tinotega coffee lands have been taken up by the enterprise of Americans on a large scale. The lands there are of the highest elevation in Nicaragua and of very large extent; they are the waterslieds of many large, partly navigable very large extent; they are the water-slieds of many large, partly navigable rivers taking their course to the Atlantic. A great part of this district is yet unexplored, and with the exception of a few small towns and villages, it is sparsely inhabited. The principal popu-lation is that of Indians, living in the forests, never having mixed much with the Spanish race.

One drawback to a speedy develop-ment of these sections is the want of

ment of these sections is the want of roads. Ox carts can be brought up to Matagalpa only in the dry season; in the rainy season, traffic is possible only on mule back, and even such cargo

on mule back, and even such cargo transport in often interrupted for weeks and months every year.

Matagalga and Tinotega lands have been taken up to a very large extent and mostly by foreigners; even Guatemala people started coffee planting on a large scale there, because the climate and many other conditions are favorable for the success of the enterprise.

HENRY E. LOW, Vice-Consul. Managua, July, 1896.

Managua, July, 1890.

An Australian professor of chemistry has discovered that the sea contains in solution in many millions of tonsof golds, that othere is considerable evidence in favor of gold being present in sea water off the New Sonth Wales coast in the proportion of about half a grain too one grain per ton, or, in round numbers, from 130 to 260 tons of gold per cubic mile. This, of course, means an enormous amount for the whole of the ocean, the cubic contents of which are put down approximately at 400,000 cubic miles; and, if the gold be minformly present at the rate of one grain per ton, the tonl amount would be over 100,000,000 tons bf golds. This exposes another imposition on the world by the advocates of silver. They are always talking about the a silver \$80.00.

A NEW BURNER.

A NEW BURNER.

The American consul at Glauchan, Germany, reports the invention of a new incandescent burner for kerosene lamps, which, if successful, will prove a powerful competitor with gas for house lighting. It is described as follows:

"A new burner for the use of petroleum has been brought to my attention very recently. The news comes from R. Dithnars, of Vienna, a prominent frun, who are awaiting the perfection of their invention before putting it before the public. The new burner, by the application of an incandescent body, is said to produce the same beautiful effect as incandescent gas and to be much more economical. The exterior burner differs but slightly from the ordinary petroleum burner. It is its interior mechanism which produces the Bunsen light—a mellow, clear, white light of exquisite softness. This effect is obtained from the formation of an extraordinarily intense heat, by which the incandescent body is brought to incandescence, promoting combustion without heating the petroleum balloon or burner, and completely exhausting the petroleum, how leaving the most remote trace of uppleasant odor, as is most frequently the case where petroleum is used as light."

NEW THEORY OF SUNSTROKE

NEW THEORY OF SUNSTROKE.

The cause of sinistroke, a subject until now obscure, has at length been identitely discovered, according to the claims of the officers of the State Pathological Institute of New York. They have made investigations which show that instead of the sun's rays being the direct cause of the sunstroke, as hasiall along been helieved by the medical profession, the internal chemistry of the body and its secretions are so modified by atmospheric conditions of excessive hot weather that some of these secretions become abnormal, either in quality or quantity, and are absorbed by the blood and act as a virulent poison.

On the first day of the recent heat plague Dr. Ira T. Vangiescon, director of the State Papicological Institute, assisted by two physicians, began investigations. The conditions we reculiarly fortunate for the success of he prosecution of their work. A record was kept of all cases, and experiments were made on cante cases. Animals treated with an infusion of blood from living cases, just after they had been stricken by the sun, had convulsions within an hour and a half, and usually ided. The physicians are convinced from the results of those experiments where is really blood poisoning.—American Exchange.

ACCORDING to Cousul Du Bellet, of Rheit s, France, about 26,000 wormout horses are shaped from England to the canning factories in Holland every year. They are then sold in France as fine American canned beef.

KOLA-PLANTING.

Within the last two months several important planters from Brazil, Ecuador, and British Guiana have visited London, and made inquiries about the advisabiland made inquiries about the advisability of starting kola-plantations. These planters mainly take up their European head-quarters in Paris, and in that city they have made experiments with köla preparations. One of them, a Brazilian, afterwards also made inquiries in Germany and the United States. He was rold that London was the centre of the told that London was the centre of the kola trade, and finally went there. Not being able to obtain any information from the wholesale chocolate-makers, he went to Kew, and also to Messrs. Christy & Co., of Lime Street, where he secured half a ton of kola-muts for seed. Kola, said this Brazilian, was a most economic crop for the planter. Those with whom he had talked about the matter in Europe he had talked about the matter in Europe had mostly asked him to ship the nuts, surrounded by leaves, in straw baskets, exactly as they have been packed in Africa for centuries, Mr. Thos. Christy, when I called upon him the other day, was enthusiastic about this Brazilian, and further told, me that he had also had visits recently from an Equadoria and visits recently from an Ecuadorian and a

visits recently from an Henadorian and a British Guiana planter, both of whom want to start kola-planting.

The planter from Eenador went to Germany and New York where he learned that there was a large demand for fresh kola-nuts, that it was an easy, clean article for a planter, and that the tree grew at a low clevation. Then, coming to London, he pursued his investigations, and purchased olants from tigations, and purchased plants from Messrs Christy & Co. Kola, he said, is sure to be taken up largely by planters, because no preparation, such as the fermenting of cocoa, or the fermenting and drying of coffee, is necessary. It runs no risk of being spoiled on its way to the coast, and there is no doubt that it is a crop that will become as po-pular in South America as it is in Africa.

The British Guiana planter's experience is almost identical, and shows that there is a movement in favour of the introduction of kola on plantations in

various parts of South America.

The great obstacle to the popularising of kola has hitherto been the want of a or for has intherto been the want of palatable preparation which might be taken as a breakfast beverage by the million. Mr. Christy assured me that his "nec-kola" fills this gap, and that it is in a great measure due to their conviction that the popularisation of kola on cocoa, tea and coffee lines is imminent that these South. American planters are disposed to take up kola-growing.

THE VICE-PRESIDENT'S MESSAGE.

On the 1st inst. Vice-President Manoel Victorino issued the following message to the governors of the several

oln token of mutual esteem and of friendly and immutable harmony, and rriendly and initiatable harmony, and in conformity with our common purpose of giving the greatest profitable expansion and the utmost hister and prestige to republican institutions in the era of process and labor which with a purpose. peace and labor which with so much peace and labor which with so much patriotism and devotion in the midst of grievous vicissitudes has been assured by the sacrifices and sufferings of Bra-zilians, I come to-day, the 1st of Januarry, to bring you, together with my salutations, my feelings and wishes in behalf of an active and fruitful policy of patriotic incentives, soliciting your valuable assistance in the solution of the grave questions that deeply affect the financial and economical interests

of the country.

"In replacing, for a lamentable reason, the President of the republic, I was

that all would do their duty and resolved that I should not be the only one

forget it.
This con to forget it.

"This confidence was not in vain; the transfer of office was effected without disturbance and with due respect for the wise and perfect constitutional provision that had been made for a foreseen contingency.

"The country had reached the acutest that had forential and counterful crisis.

stage of a financial and commercial crisis whose solution had been postponed for four years by means of artificial and delusive expedients. The natural evolu-tion of events had been thus hindered whence resulted the accumulation of ele-ments which inevitably had to produce

a fatal eruption. a fatal cruption.

« After a period of unlimited expansion of capital and credit, for which no due preparation had been made and whose feeble basis was the fictitious system of excessive issues, a reaction necessarily had to follow, embracing all the phenohad to follow, embracing all the phenomena which in every country and in all periods accompany commercial crises as unfailing symptoms, varying from simple restrictions in credit up to a complete panic. The duty of public men upon whom may weigh the responsibilities resulting from the oppressive and alarming situations to which such circum stances lead is to guide and facilitate liquidation, the only known remedy for these transient disturbances in the life these transient disturbances in the life of nations, rendering assistance and support to legitimate interests and permitting the climination of visionary undertaking engendered by audacity and speculation.

engendered by sudacity and speculation representing neither honest commerce nor productive industry.

"The constant depreciation of the currency, which increased with every new issue, thus by a species of petitio principit provoking further issues, forced legislators to enlarge the budget, since a fourth of the whole federal revenue was absorbed by differences in exchange,

"The only known remedy for this other evil, which moreover threatened to absorb all the resources of the nation and which had already exhausted all

and which had already exhausted all practicable measures and expedients, was that of redemption, which was in-dispensable as a means of salvation to be adopted at any cost, together with the strictest economy and the employment of the revenue obtainable from governnent railways under more competent management

« Luccordingly asked congress to empower me to assume responsibility for the bank issues and to furnish me means

for redeeming them,

"With justifiable pride and with feelwith Justianon parte and with receivings of deep gratitude to the highest power in the country. I deem it my duty to say to you that this proof of confidence, which at the same time was a most valuable service to the interests of

most valuable service to the interests of the nation, was voted almost mani-monsly by the two houses of congress. «The decrees already promulgated display my firm resolution of honoring my pledge to my fellow-citizens. What-ever may be the time of which I may dispose in the performance of my presi-dential duties I shall proceed with un-shaken determination in executing the measures which, in my orinion, are necmeasures which, in my opinion, are necessary and admit of no postponement for improving the credit and restoring the financial and economical strength of

the country.

a This policy, now embodied in the legislation of the country, will-not, I believe, undergo any change if the President, now happily restored to health, should resume to morrow the office which be was so worthily selected to fill.

a It behooves me, however, as a complement to the policy adopted, to appeal to your powerful and indispensable cooperation. The safest and most indestructible basis of credit is that which is furnished by labor and production, and in Brazil it is necessary to enlarge their extent and variety.

The various industries, especially

arge agricultural credit, directing thereto the attention and resources at the disposal of the banking establishments now in existence and of those which may be freely organized hereafter.

"It is likewise necessary that labor and production shall not be annually consumed in the incessant outflow of consumed in the theessant outlow of wealth mercenarily remitted (que a fane-ta mercuaria remette) to foreign countries, thus preventing the accumulation of available capital for assisting and imroving them

roving them.

"The undivided large estates, the exressive price of lands and the selfish and
lebilitating salary system create for thealture of coffee, which is the most reununerative and almost the only culture
in Brazil, the abnormal situation of a
product which, though it has been a

benefit of the selfice of the selfish and the self product which, though it has been all Brazilian monopoly, is still almost enirely dependent on foreign labor which
in savings and expenses sends to foreign
countries all it earns beyond the cost of
iving. It is necessary to adopt measures
acilitating the division and transfer
of landed property and inducing the
aborer to cling to the soil and employ
its savings in the purchase and cultivation of land. To create and develop ou of land. To create and developed cultures and industries, so that the ion of land. new cultures and industries, so that the product of the sale of coffee, or of any other article still exported, may not be ill absorbed in importing at an exorbitant price with a depreciated enrency the common necessaries of life, is an economical desideratum that requires regulation.

conomical desideration that requires prompt realization.

« The budget law recently voted authorizes the federal government to enter into an agreement with the state governments for the purpose of proposting and sencouraging stock-breeding, the cultivation of bread-stuffs and other industries. The state legislatures will soon be sitting and I request you to unite with me in devising means for increasing and didevising means for increasing and di-versifying production and for giving it new and more powerful resources. The constitution permits the states to levy taxes on imports whose product reverts

to the union.

«The legislative authorization to which 1 refer above empowers me, however, to relinquish those sums, and this I will do whenever they are applied to premiums for products or exports by the respective states.

respective states,

a Under the influence of peace and liberty and of the natural and cultured interest with which you have sought to surround the lives, labor and property of all who tread Brazilian soil with all

Whether it be a good or a bad thing for the nations, there is no room to doubt that the debts of the world are growing steadily. In 1875 it was computed that they stood at £4,250,000,000 two years earlier. On the basis of figures, many of which have been obtained by us at first hand, and are likely on that account to be more accurate than some of the wild crusses to likely on that account to be more ac-curate than some of the wild guesses to which certain irresponsible statisticians have treated us, we ourselves estimate that the indebtedness of the world to-day stands at \$5.800,000,000. As prob-ably every one knows. France has the doubtful distinction of being the country which have the largest debt. The latest of the country.

"In replacing, for a lamentable reason, the President of the republic, I was called to occupy this post in one of the most difficult periods through which the government of Brazil it is necessary to enlarge their government of Brazil it is necessary to enlarge their government of Brazil it is necessary for me to impress upon you the idea of the difficulties and apprehensions that surrounded me when I assumed the presidency. I did not, however, hesitate an instant, but trusted

debts of the two portions of the nation. The joint debt stood in 1895 at £275, 990,000; while the debt of Austria alone was £122,678,600, and that of Hungary alone £207,729,000, or £666,397,600 in all. The United States debt amounts to £339,000,000 and that of Spain—exclusive of the more recent loans in prosecution of the war in Cuba—at £279,000,000. In the following statement, we give a comparison, for 1895 and 1875, of give a comparison, for 1895 and 1875, of the indebtednesses of the nations which now owe, or did then owe. E100,000,000

Total ... f 4,241,00,000 [5,172,000,000]
In spite of the substantial reduction of the English. American, Spanish, and German debt., there is a retaincrease for the fourteen nations in the awenty years of 84,8,000,000. It may be added that in 1855 these same twelve nations owed £4,140,000,000,000; Total Britain, £740,000,000; India, £127,000,000; Yanida, £127,000,000; Turkey, £127,000,000; Turkey, £127,000,000; Turkey, £127,000,000; Turkey, £1858, £3,000,000. In the years \$15,585 there was on this showing a net reduction of about £15,000,000 on the indebtedness of the nations enumerated; but the whole world's obligations in 1885 represented an increase on 1875, our calculations giving a total for the former of nearly £4,900,000,000. Among the migne debtos. mer of nearly £4,900,000,000. Among the miner debtors, Relgium has increased its obligations from £71,000,000 in 1875 to £91,000,000 in 1895, and in the same time the debt of the Netherlands has gone up from £80,000,000 to £92,500,000, and that of Canada to £92,500,000, and that of Canada from £30,000,000. The Greek debt stands at £32,984,000, and that of Mexico at £32,720,000, (as against £63,500,000 in 187,5%) while among the new borrowers must be reckoned Japan, which now owes £47,-300,000, and the Argentine Republic,

the guarantees are republican institutions but an republican institutions but are position which our country occupies as an enlightened nation, you will patriotic ally succeed in adding me in my purpose of increasing the resources of the country, developing its production, raising its credit and establishing the reputation and prestige of the new regime which is capable of attaining the highest degree of prosperity and grandeur.

The sum paid annually as interest on the world's debts approximates to the world's debts approximates to expand the sum of the sum paid annually as interest on the world's debts approximates to expand the sum of the sum paid annually as interest on the world's debts approximates to the world's debts approximates to expand the sum of the sum paid annually as interest on the world's debts approximates to expand the sum of the sum paid annually as interest on the world's debts approximates to expand the sum of cent., India 4 per cent., Holland 4 ¼ per cent., Canada 4½ per cent., France, Russia, and Brazil 5 per cent., Italy and Portugal 6 per cent., Hungary 7½ per Portugal 6 per cent., Hungary 7/2 per cent., Egypt 8 per cent., Turkey and Peru 10 per cent., Spain 15 per cent., and Mexico 18 per cent. France, of course, pays out the largest sum of money every year in the way of interest, the total running to about £37,000,000, or 198. 8d. per head of the population. Great Britain's disbursement is £24,500,000, pays do per head Russia. Great Britain's disbursement is £24,2540,000, or 12s. 9d. per head. Russia pays out a little more, £24,726,000, or 4s. (1d. per head. Austria-Hungary, on the joint and special debts, pays out £37,190,000 a year, and the average per capita expressible of the period of

annually, or 13s. 1d. per head. Though the capital itself is a large item, the charge per annum in the United States is no more than 1s. 9d. per head. In Uruguay, on the other hand, it runs to a much as £1 2s. 6d. per head. Burguay and the state of the Uruguay, on the other hand, it runs to as much as £12s, 6d. per head. Burdett says that in Peru this per capita charge runs to £13s., but there must be something wrong with Burdett's figures. In Portugal the amount is 15s. 1od. per head, and in Egypt 11s. 1od. per head. In Germany it is no more than 1s. 4d. Can any one say off-hand what is the aggregate debt of all the English possessious in all parts of the globe? We will give the total—it is £1,097,166,600. After the mother country India has the heaviest debt, the total being, as we have

After the mother country India has the heaviest debt, the total being, as we have seen. £127,600,000. We have found a type of the same general style as that previously used, but a trifle more legible owing to its leavier lines. The paper will therefore not only be improved by the use of a soundress but its commercial depart. new dress, but its commercial department will be more satisfactory on account of the greater legibility of the type

THE New Year's message of the Vice-President, which we reproduce in another column, is a distinct departure. It is very unusual for the President of a republic to send out such a message, and the operation with republic to send out such a message, and the occasion of this exception will ineritably arouse profound curiosity. We must confess, however, that the document is thoroughly disappointing. It is occasioned by the critical financial situation of the country, but it is for congress; and not the state governments, to remedy this. The suggression that to remedy this. The suggestion that steps should be taken to provide lands steps should be taken to provide lands for the laboring classes is good, as also the recommendation in favor of a greater diversity in production, but these changes are now very largely dependent upon private initiative. The purpose of using public funds to promote stock-raising, and the development of new agricultural victories is redically wrong, while the and the development of new agricultural industries, is radically wrong, while the suggestion that the states should levy import duties for this purpose is worse than wrong. The states have no right to impose such duties, and it is not within the province of the exceptive either to interpret the constitution or to give them permission to do so. A more mischievous suggestion could not have been invented.

Ir would be interesting and perhaps instructive to know, just at this time, what Vice President Manoel Victorino, means when he speaks, in his message, of the "incessant outflow of wealth merof the "incessail outflow or wealth thereunity remitted to foreign countries."

Does he refer to the profits carnel in business (now infinitessimal), or in industrial enterprises, or as dividents from railway and other investments? If so, how does he make it out that the foreigner who invests his money in the foreigner who invests his money in the country, in some business or industry contributing to its prosperity, is uncernary in withdrawing the profis or dividends legally belonging to him? The money belongs to him and he has a perfect right to do with it as he pleases. His industry and money have benefitted the country, he has met all bis obligations, and he is free to do just what he likes with his own. As long as he does not choose to make his home here, it is perfectly natural that he should here, it is perfectly natural that he should remove his profits to some other place. He does this in other countries and n one questions the propriety of his doing so except in some two or three American so, except in some two of meet functions republics. No one criticises the native who spends his profits, and sometimes his whole, substance in Paris, and yet were any interference with the individual's liberty in such matters permitted, this would be the best if not the only subject for the control of participing. But the for censure, or restriction. But the Vice-President had been talking about developing agriculture and other productive industries when he referred to this "mercenary" removal of wealth, and it may be that he product the state of the product of the state of the product of the state of the product of the pr this "mercenary" removal of wealth, and it may be that he meant the savings of the poor Italian laborers, which are largely remitted to Italy, It so, then he has still less reason for his censure. The Italian laborer carns little enough. The Italian inhorer earns into enough, and he works very hard for it. He lives frugally, if not miserly, in order to save the greater part of it, and it is nobody's business what he does with it. It would be far better for Brazil were be to invest it in land, but the government and the planter have practically discouraged such investments. All the lands within easy reach of towns and names within casy feach or towns and railways have been absorbed by the large proprietors, who are rarely dispo-sed to sell in small holdings. And even if they were, the heavy tax levied on transfers tends to discourage the investment. But whether the laborer buys land, or opens a venda, or throws his nand, of opens a what, of lines, he money away on cards and lotteries, or sends it home to Italy, it is all one and the same thing. It is less 'mercenary' in fact—if the term can be applied to such acts—for him to send it home for investment or to assist unembers of his own family than it would be for him to throw it away on the scores of lotteries in the country created to entrap lotteries in the country created to entrap and impoverish the men of his class. If the government is concerned about these things, why does n't it do something to attach this poor foreign laborer to the country. Let him have the opportunity to buy a few hectares of good land on easy terms. Let him have an opportunity to educate his children. Let him be taxed lightly, governed justly and equitably, and protected in all his rights and orivileres. Make life and equitably, and protected all his rights and privileges. Make life attractive to him, and he will prefer to remain. But if he is governed "mercenarily," then he will send his enrulage. away as fast as possible and then go away himself to enjoy them elsewhere.

THE negotiations for the lease of the state railways, it is to be feared, will end in many disappointments. With that extraordinary lack of business forethat extraordinary lack of business foresight which seems to pervade political circles in this country, the conditions of the lease have thus far not been made clear and definite, and the time within which the negotiation is to be completed, is absurdly short, judging from current expectations. Although the *calial* has not yet been issued inviting tenders, the recent executive decree fixes many of the conditions on which the lease is to be recent executive testers facts may be the conditions on which the lease is to be made. Whether some doubtful points will be cleared up in the citial, we do not know; but if they are not, the transaction will run a very great risk of failure. And if the time for receiving

bids is limited to three months, as stated by some journals, no bids will be made at all, unless by syndicates of specula-tors. It is absurd to expect that serious capitalists will bid on the lease of such a property as the Central railway, in-volving an expenditure of not less than volving an expenditure of not less than ten millious sterling, without first mak-ing a careful examination of the pro-perty, its condition and requirements, and without making an equally care-ful study of its earning capacities. This will involve two or three months work on the line by competent engineers, adon the like year contents, and one or two months work on their reports, before any reputable company, or syndicate, can even make a tender. Should the eate, can even make a tender. Should the tender, or tenders, not meet the views of the government, then a new edital must be issued, or negotiations must be opened with the syndicate whose bid comes nearest to the official require-ments. In our opinion, if the lease is effected within twelve months, barring all purely speculative offers, it may be considered quick work. Should the goverimient elect to accept the offer of any syndicate of speculators, who intend to transfer the property to a subsequentlytranster the property to a subsequently-organized company, the results will prac-tically be the same. The government may realise on the lease sooner, but the syndicate will find it impossible to place the property with experienced railway men until a thorough examination and report have been made by competent and trustworthy, men. We all know how trustworthy men. We all know how long it took to arrange for the duplication of the São Paulo railway, which is owned by an English company, and we all know how averse experienced rail-way men were to a further investment of two millions until certain details were arranged. Why then should we expect anything different in the case of a notoriously mismanaged line, involving an investment of, say, ten millions sterling, and the title to which is not absolute, but only a sixty-years lease? There are but only a sixty-years lease? There are no indications, so far as we can see, that investors are blindly lungry for this property. They know it is in bad condition, and they know that the government expects a large sum from it, more perhaps than it is really worth. Under such circumstances, they will be extremely cautions, and they may be in-clined to ask guarantees as well as to give them. Then as to the few points which are not clearly defined in the recent decree —what will the government do about these? In this decree the government treats of the lease of these railways as a single transaction. Is this its inten-tion, or will bids for separate lines be tion, or will olds for separate lines be accepted? Exery one of these railways yields a deficit except the Porto Alegre and Uriguayana line. Some of them, under good management, can be made to yield surpluses in a very short time, but others, like the Paulo Affonso line, will require an indefinite time to others. will require an indefinite time to achieve such a result. Moreover, no single company would care to undertake the company would care to undertake the management of so many widely-separated roads. In view of the present state of the country and the unsettled relations between the state and national governments, it would be practically impossible. Then, too, it would be easier for the English companies already and third in Paris. established in Bahia. Pernambuco and Rio Grande do Sul to take over and operate the government lines in those states, than it would be for any new company established in Rio de Janeiro. Such an arrangement would be rational and economical. Then there is the question of annuities and half pay to which certain government employés are entitled. Who is to be responsible for these, the lessees or the government? Naturally the lessees have nothing whatever to do with such obligations but it should be so stated. In every case the private companies undertaking to administer these roads should be free from every onerous condition or obligation created previously to their taking charge, and they should have the fullest liberty in the management of the properties. It must be remembered that they are not acquiring an absolute title to the roads. They are acquiring pos-

session for sixty years only, the property at the end of that period to be returned to the state in good order and without indemnification. Within these sixty years, therefore, the lessees must carn dividends sufficient to cover the capital invested, ordinary interest on the same (for they are paying part or all in advance), and the usual dividend. Under such circumstances they can not afford such circumstances they can not afford to employ instrustworthy and inefficient men, nor can they afford to have their hands tied by official restrictions. It is possible that the edital may clear up some of these points, but it is to be feared that the government is expecting a little too much in the transaction.

THE ELECTIONS.

Returns received from the elections held on the 30th ult. indicate that the new congress will differ little from that

new congress will differ little from that which preceded it, the republican federal party having apparently elected the greater part of its candidates.

In this city that party elected the seven candidates which it presented on its ticket for deputies and also Dr. Thomaz Delfino, its candidate for the senate, who is credited with 5,703 votes, against 4,397 for Dr Gabiso. In the 1st and 2nd districts the latter defeated his opponent, whose defeat would have been complete had he not been saved in the 3rd district by the parishes of Santa Cruz. Campo Grande and Guaratiba, in which he received 1,862 votes, against 60 for all the other candidates.

Nearly 2,500 scattering votes are re-ported, so that the total vote east in the federal district, according to the returns published, was about 12,500, which is

paintsiled, was model 175%, which installs large, although the voting population is said to number over 40,000.

In the 1st district the democratic federal party elected one of its candidates. The other two candidates elected are Dr. Trinen Machado, a notorious jacobin, in the 2nd district, and in the 3rd district Dr. Felippe Cardoso, a new man who has not yet defined his position.

A simple glance at the result is suffi-cient to show that in this city the opposition with a little better organization and a more thorough canvass could have carried the elections. For this pur-pose it would have been necessary only to induce a few more opposition voters to go to the polls and at the same time to watch the elections a little more closeso as to eliminate the fictitious vote of

the dominant party.

Both in the federal district and in the states, much fraud and some disturbstates, find and apparently there will be many contested election cases. In Sergipe and Piauly and perhaps in some other states two distinct sets of candidates will probably claim to have been

FEDERAL INTERVENTION.

Some mouths ago the dominant party in the state of Rio de Janeiro, for causes that have not been made public, decided to break with Baráo de Miracema, an influential politician residing at Campos and protector of Dr. Nilo Peçanha, pos and protector of 10. Mor regamia, at that time a member of congress. In pursuance of this policy the state government dismissed the police authorities friendly to the Baron and replaced them with his adversaries. The Baron, men with its adversaries. The Baron, who still controlled the municipal chamber of Campos and perhaps some others in the 2nd congressional district, determined to oppose the candidates of the dominant party in the congressional election and organized a ticket of his own, one of his candidates being his protegé Nilo Peçanha. At the latter's instigation Federal Judge Godofredo da Cunha, Senator Quintino Bocayuva's son-in law, obtained from Vice-President Manoel Victorino on the evening before the election 30 federal saldiers, with whom on the last train that day he proceeded to Campos, ostensibly for the purpose of enforcing respect for his writs of habeas earlyus. On hearing of this the governor of the state of Rio de Janeiro made a vigorous protest and Minister, Albarte Teach who still controlled the municipal cham-Janeiro made a vigorous protest and Minister Alberto Torres, who belongs to the dominant party in that state (Partido Republicano Fluminense) t cued to resign, being supported, said, in his demand for the recall Pluminense) threatported, it is recall of the ened to troops by the other ministers, without whose knowledge Vice-President Mawhose knowledge Vice-President Ma-noel Victorino had complied with the requisition of the federal judge. The Vice-President consented to order the recall of the troops, but before his order was obeyed the election had been held and at the station of Mineiros on the S. Sebastião railway there had been a fight in which two federal soldiers and fight in which two federal sources, one state policeman were killed. On Thursday, by order of the Vice-President the 1st battalion of infantry, 553, the the train for Campos. The strong, took the tmin for Campos. The governor of the state again protested and reinforced the state police stationed at that town.

When the train conveying the battalion reached Campos many of the soldiers stood at the windows of the cars pointing their guns towards the city. They were met at the station by Nilo's friends who loudly cheered Manoel Vie-Quintino and Godofredo.

It is asserted that orders were issued for the 10th battalion of infantry and oth regiment of cavalry to be sent to the assistance of the 1st battalion in

the assistance of the 1st battanon in case of a fight with the state troops. On Friday Minister Alberto Torres tendered his resignation, which was accepted yesterday, and Dr. Joaquim Xavier da Silveira Junior was appointed

to fill the vacancy.

The minister's letter of resignation is said to contain severe strictures on the Vice-President's conduct, and Manoel Victorino, it is reported, has endeavoted to induce the minister to withdraw his resignation, or modify the language of the letter in which it is tendered.

Dr. Poreinneula, minister to Uruguay,

who has just been elected senator for state of Rio de Janeiro, is reported to have likewise tendered his resignation of the office of minister in token of his dis-approval of the Vice President's conduct. The 1st battalion of infantry has re-

turned to this city.

The Republica of yesterday says that Into Reputate of yesternay say that Minister Alberto Torres persists in his resolution of resigning. That paper censures the federal judge, to whose nuwarranted apprehensions, it says, the Vice-President perhaps too rendily gave credence. The official organ was not well informed, however, for the resig-nation was accepted later in the day.

A VESULIAN SQUIRT.

S. Paulo, January 1st. 1897.

To the Editor.

Although I have seen something of the world Mr. Editor, it has never been permitted me to see a live volcano on the rampage. Thave read about them, and have made myself familiar with their strong points in the ordinary colored illustrations, but I have never happened to see and feel and taste the real thing.

Under such circumstances the strething an nouncements of the 29th and 30th alt, about the sudden appearance of a volcano it Santos. could not fail to fill use with an intense longing to see the tremendous phenomenon. The tele-grams spoke of it as a Vesucius with a crater four metres in diameter, from whose troubled interior was project of fire and water and mud and small stones. And it was even Sw and small stones. And it was even se_2bat lava had begun to flow, and that the thermo-meter marked 49° Ceut. (120° Fahr.) at a dis-tance of three metres from the crater. I thought it rather daving for a man to walk up within ten feet of a genuine Vesuvius in cruption in order to get the temperature with his therm-ometer, but there are some men in this world. you know, who are quite capable of it. True science knows no fear and stops at no sacri-

Well, I somehow felt that Santos was doomed, and I writted to say good by to the boys before they began posing for the future antiquarian excavator. I knew there were some good drinks left down there, and it seemed a pity to see so much of it wasted. Then, too, I wanted to see the volcano. It was said to be income in the pitch was the pitch wanted to see the volcano. It was son on the pictures que outs, kirts of the town on a pacee of that hand under the Outerinhos hill. The ground had been lately cleared of bushes and weeds, which probably weak-drouth and san.

ened its resistance to the terrific forces be neath, and then the sanitary smiths began dig-Revy's lengal d'agua thereabouts. cut down through mad, sand and clay to depth of 17 metres, and then the raction began. It broke out on the night of the 28th, and from all I could hear it was growing worse and mor dangerous every minute.

After auxiously scanning the horizon toward Santos to see if I could make out the clouds of threabning smoke which ought to be hanging threatening smoke which organic to be tanging over that devoted town. I packed up my fa-vorite swizzle stick and a couple of surfu-wizhes, took the train and started for the disturbed district. All the way down my thoughts dwelt constantly on Pompeli, and of the terrible fate which overtook that little village some 1,800 years ago. What if such a fate were in store for Santos? And then I throught of Silva Jardim falling into the gigantic throat of the older Vesavins, while his old home should be overwhelmed and has an nome should be wearned and buried from sight by this younger Vesuvins. It seemed in subjectly the Santos policeman stoically sleeping at his post, the municipal conneillor trying to escape to the hills with his burden of legitimate spoils, the coffee porter caught in the act of taking another somple before leaving the unguarded ware-house, and our old friend X with swizzle-stick in hand mixing another fever antidate before retiring to some country resort. What a surprising series of studies they would all make

Well, while in the midst of these ghoulist speculations we arrived at our destination, and I started out to warn my friends, and to see the volcana. But, somehow everything was going on as usual! There was no pall of threatening smoke overhanging the city, and I saw no ashes in the streets. On the contrary, the sun was not enough to make one wish for a volcano just for a change, everyone was perspiring over coffee and exchange, the sanitary sharps were smelling around for tips," and every other man I met wanted to know if I wouldn't try a refresco with him. It didn't look a bit like a catastrophe, so I concluded not to mention the volcano.

In due time, however, I took the "bond" which skips along over cobbles and mud in the direction of Villa Macuco. There was a his growd of the customary sight-seers, mostly black, perspiring and smelly. With seating a in my nostrils, I felt that I With so much was a blue have of *talinga* all over the landscape. As we approached the scene we found crowds of people standing about discussing penny leaves, watermelous and lukusess. penty loaves, watermelous and lukewarm beer. It looked like a Penhin festa, and there was no more thought of future roasting here than at the other merry-making.

And then a sharp hissing, crackling sound fell upon my rar, and as I reverently approuched the Brizilian Vesuvius I sow an irre gular column of muddy water, charged with gas, rising to a height of 15 to 30 feet. The gas was burning furiously, as it was bound to do, but the flame was in the air and not in the hole. The water was not even warm. There hole. The water was not even warm, There was no trater, no lava, no punice, no smoke, no carthquake, no lurid sky, no volcamo even! It was nothing but a tu'penny gas well, and a villaimously evil smelling one at that I It was villainously evil samelling one at that? It was a penny squirt compared with Vesuvius, but good enough for the sensation so dearly prized on these shores. Like all things Brazilian, it will exhaust itself in a few days, leaving nothing but the monumental plans and monumental asses behind it, for it is seriously believed that Santos will henceforth be lighted. and horse-powered with it!

With another drink to remove the taste of marsh gos from my mouth. I remain,

WYNNOT

PROVINCIAL NOTES

The requening of the Centro Monarchista in S. Paulo has been prohibited by the police. - It is said that Dr. José Mariano and some other «autonomistas» have been elected deputies in Pernambuco.

-The Juiz de Fôra papers state that the recent rains have saved the crops in that vicinity which had begun to suffer from the

-Telegrams from Maranhão state that Dr. Benedicto Leite has been elected senator from that state by over 1,000 majority over his opponent Dr. Aarão Reis.

- A Permumbuco paper has recently charged Minister Murtinho with the blunders which the Vice President has been making and which probably soon terminate his administration.

It was telegraphed to Petropolis on the and inst. that a conflict was imminent between the state and federal forces in Nictheroy. to date, however, nothing noteworthy

- The town of Mogy das Cruzes, S. Panlo, onewhat undecided. During the months of October and November there were 69 births aml 69 deaths in that town, and no one knows which way the tide will turn.

- We are glad to see that, notwithstanding the lartufes, the sanitary state of the town of Limeira continues good. It must be added, however, that the municipal and sanitary authorities have combined to prohibit the sale of niclous in that place.

- The Diario Popular, of São Paulo, of the — The Pharto Expatar, of Sao (2016), of the 2nd inst., publishes the portrait of D. Marianna Custodia de Sonza, of Lambary, Minrs, who is said to be 137 years of age. The Diario is mable to give the year of her birth, however, and the proofs offered are hardly satisfactory.

-The monarchist candidate at Uberaba, Minus Geraes, obtained 105 votes, against 300 for all the other candidates combined. Had there been a really free election and had the monarchists chosen to contest the elections, they would certainly have gained many seats

- A Pará telegram of the 3rd inst, says that the resignations of Drs. Alberto Torres and Porthe resignations of 18s, agod impression there, clinical have resided a good impression there. The Vice-President is perhaps beginning to see that his interference in the affairs of the states is not so popular as under the military dictatorship of Floriano Peixoto.

- The police authorities have a second time closed the monarchist club in São Paulo, not because of any overt act, but simply because the said club is opposed to the present regime It does not show much confidence on the part of the Sao Paulo republicans in the stability of their own institutions, nor yet a very elevated cuse of justice

-According to our Pará exchanges the abuses on the tramways in that city in making

- In Pará on the 28th alt. Engineer Alexandre Hang, accused of having embezzled the sum of 500,00 \$, when curployed in the telegraph service, was arrested on board the French steamer Paramagna. He was on his way to Bolivia, was travelling under a false name, and was accompanied by a second wife, his first wife having been abandoned in Manáos.

- The Senate of the São Paulo legislature — The Sente of the Sio Paulo Tegisloure has thrown out the bill, passed by the chamber, appropriating 100,000 for the proposed medi-cal congress this year. But this same legisla-ture passes an appropriation of 24,000 to be istributed as premiums among breeders of As a rule the average legislator knows how to legislate in his own interests.

— There was a savage fight in Sho Paulo on the 30th between two Spaniards named Aranha and Romen. The former was killed by a frightful slish in the back from a knife, and the latter was wounded by two pistol shots and a knife thrust. They were men el bad character, and are supposed to have quarrefed over the results of some business which it may not be convenient to expose.

- There was a fight in Santos on the 21st ult, between a group of excited Spaniards and the police patrol. The former gave vivus for Spain and morras for Brazil, after which they plunged into a mangrove swamp to escape the mounted police. After a time, thinking that the enemy had retired, they came out again, when they were promptly attacked. They then jumped into the sea ami swam out safety. The police then secured boats and aptured five of the valuant sons of old Spain. to safety. They were then permitted to give their and worras in "quod," where their enthusiasm slowly ebbed away under the depressing influences of the Santos gaol.

- Among the candidates for congress in São Paulo there was one whose Sao Pano there was one woose creams to voters was almost wholly made up of copies of private letters from Glycerio. The favor of a shosse is not infrequently almost the sole recommendation of a candidate for office, but it is nunsual to see it so openly displayed. It must be said, however, that in this case the candidate is in opposition because Glycerio had thrown him overhoard, and the compliment ary letters published was an effort to use Gly-cerio against Glycerio.

- Telegrams of the 29th ult. from Santos give an account of a volcanic eruption in the vicinity of that city. From the crater, which is said to be about four metres in circumference there issues a column of flame, unid and small stones, reaching a height variously estimated in different accounts at from 5 to 30 metres. Many people have gone from Somos to witness the phenomenon. The first accounts called it a Vesavius, and even frinted at its being a rival to the original. There is probably some little the original. exaggeration in regard to the matter. quent reports show it to be only an ordinary gas well, which had been accidentally ignited!

MORRO VELHO ATHLETIC CLUB.

A match, Married to Single, was played at Morro Velho on Friday last, the 25th, to conmemorate Christmas day, and ended in a victory for the Married men by 68 runs on the first innings.

The field was well attended and together with the music (light refreshments) and a fin a pleasanter match could not have been wished for anywhere.

For the Married side, D. Green, J. Stephens

and F. Harvey with the ball and T. Atherton with the but, slid good work, while for the Single side J. Green and T. Tarling in the first innings batted well and T. Gill in the second played a very good game.

The score is as follows

SINGLE MEN

- Manoel Isidoro, whom the state govern ment of Alagôas has for a long time vainly endeavored to capture, has been at last sur prised and killed by a police force. It is stated that the commander of this force caused the head of the dead man to be severed from the body and satted for the purpose of taking it to the state capital. When he and his men reached Palmares, the people of that town, indignant at such barbarity; forced them to relinquish their purpose,

RAILROAD NOTES

- On the 30th ult, there were almut 2,500 head of cattle at various stations of the Central awaiting transportation to the Santa Cruz abattoir.
- -It is stated that to contractors on the tension of the Central railway will be offered the sum of 400,000\$ as a compensation for the relinquishment of their contracts.
- The Jornal do Commercio of the 30th ult, says that it is believed in well-informed circles that Dr. Paulo Proutin will be appointed fiscal of the Central railway in case this road is leased.
- The new time-table on the Central did not go into effect on the 1st inst, as announced, but will do so on some date up to the 15th just. This delay is consed by the bad condition of the line at a few points, where changes are ne cessary before fast trains can be safely run.
- —A report is current that representatives of various syndicates are on their way out to negotiate the lease of the Central railway and to investigate the condition of the line. Dame Rumor is surely making a very silly exhibition of herself this time. That syndicates should be prepared to hid for the Central railway before examining the property and even before the call for proposals is issued, is more than sane people can reasonably expect,
- -Ou'Thursday the American firm of Harry Channey Yambert & Co., by its representa tive in this city, signed the contract for furnishing coal during the present year to the Central railway. As doubt has been expressed in regard to the quality of American coal, the contractors agree to furnish this month 6,500 tons of British coal and bind themselves to keep a stock of 12,000 tons of such coal until that from the United States shall have been tested to the satisfaction of the director of the
- The general conditions relative to the lease of the state railways were published on the 29th ult., and the newspapers of the next day began to speculate who would be appointed government fiscal. It looks like a strong case of anticipation surely, for it will be excep-tionally lively work to close the business with even the best-intentioned foreign syndicate within nine or ten months. If the Central passes under control of a private company before the end of 1897, we shall consider the negotiation a fortimate one,
- A Pará telegram published 14th November amounced the suspension of work on the Alcobaça railway on the upper Tocantius, connecting Pará and Goyaz. On the same day the president of the company denical the report, saying that the personnel had been reduced for reasons of economy, and that the loan from the state of Pará of 375,000 had all been employed in construction services. On the 10th alt, the *Provincia do Para* contested this statement, charging bad administration and incompetency. The Provincia says that the chief engineer and the whole of his staff had been in Pará, and lead returned to the Tocautius on Dec. 8th, "to recommence work." As to the employment of all the 375,000 in construction, the *Provincia* says this is not true. Over forty contos aloue went to the company's lawyer in Rio de Janeiro
- In New Zealand the silver question cuts no figure, but the people are demanding reforms just the same, says an exchange. A computsory half-holiday law has passed its second reading in the house of representatives. Under its provisions every woman must turn her servants ont of the house from 3 to 10 p. m. one day a week, under penalty of £5 fore. If the servants return she can refuse to admit them before to p. m., but if she does admit them she will be compelled to serve them. As many sivant girls in New Zealand, as in America, are country girls, they will be compelled to which the streets during this companisory half holiday. It is dangerous to send a man to a legislave who is afflicted with the law-making itch. bey will get up all sorts of idiotic laws when the feel bad.

COFFEE NOTES

- The exceptionally hot weather and drouth which was experienced during the last three weeks of December caused some damage to the maize crap, and threatened to prejudice the coffee crop. The rains at the end of the month, however, seem to have averted this threatened disaster to the coffee planter.

Local Notes

- One of the men stabbed in a fight on election day, died on the 31st.
- The government has bought for the Bris burgo palace Parreirus' painting As Sertanejas.
- It is stated that among the troops belonging to the garrison of the fart of S. João there have been over 60 cases of beriberi.
- On Wednesday night a lighter containing inflammalde substances and lying at the Prainha pier, was destroyed
- It is stated that the Brazilian government has decided to sell to that of Japan the ecuiser Barroso which has just been constructed in Curope.
- throughout the country on the 28th alt, in commemoration of the late Empress D. Thethroughout the country
- vernador in December, 1893, committed suicide on Tuesday last at Engenho de Dentro.
- Schator Coelho Rodrigues has resigned his place on the executive committee of the democratic federal party. He promises, how-ever, to continue to work for that party.
- During the past month not a single case of yellow fever was reported from the shipping on the bay. The hysterical medicos on the Buenos Aires health board should make a note
- The government has accepted the resig uation off Dr. Fernando Abbot, Brazilian minister at Bueuos Aires. A report is current that Dr. Porciuncula will be transferred from Montevideo to Buenos Aires.
- By a decree of yesterday's date the Vice-President appointed Brig. Gen. Francisco de Paula Argollo as minister of war, and Dr. Joaquim Xavier da Silveira Iunior as minister, of ustice and interior vice Dr. Alberto de Seivas Martins Torres resigned.
- On Wednesday disturbances were caused on Rua da Miscricordia by rioters said to belong to the 6th lattalion of the national guard. All the furniture of the café at No. 16, valued at 2,000\$, was destroyed and fire arms were discharged, but no one seems to have been wounded. The rioters, about 20 in number disappeared before the arrival of the police.
- For the congressional elections held in this city on the 30th ult. to choose one scunton and three deputies, there were seven candidates for the senatorship and 57 cambidates for the chamber. It is encouraging to find that the country possesses so much good material for the law-making branch of the government. If now these dedicated servitors could only be prevailed upon to adopt a few much needed laws, Brazil would be a most fortunate nation.
- Although the Santa Theresa company has been the recipient of many sharp criticisms for its treatment of passengers, we do not seem to have reached the end yet. The latest dodge is for the conductor to keep the change due to a passenger when the latter happens to be with ladies and therefore not likely to remind him of so small an oversight. It is not the hundred reis that annoys the passenger in such a case, but it is the cool impudence and unbiushing rascality of the coudnetor.
- Among the arrivals at Para from New York on the 16th ult, was Bishop John Vincent, of the Methodist Episcopal church, who was on his way to Manáos to visit the missions established there. Bishop Vincent is widely known as the founder of the Chatauqua Lite. rary Society, the largest and most popular literary and educational association in the United States. He has devoted many years of faithful effort to the development of this asso-ciation, and to the preparation of text-books for its members. Bishop Vincent is expected to arrive here soon, on his way to Buenos Aires His visit to Rio, however, will be very brief.

 It is said that the purchase of the Huipit has been decided, and now the same company proposes to sell the Haipara. It must be confessed that the purchase of these merchant steamers by the government is fundly in harmony with its promises to reduce expensi-

THE STRANGERS HOSPITAL

The management has much phrasure acknowledging the receipt from Messrs, Watson Ritchie & Co. of one case of "Apentan water for hospital uses, and one case of Apollimaris for the nursing staff.

Also two Venetian window screens, three vinhatico towel rollers and services in monuting them from Messrs, Curshley & Co.

PUBLICATIONS RECEIVED.

Calcud... s for 1897.—We are indebted to the American Bank Note Company for specimens of their handsomely designed and printed calcudar, which is so much appreciated in every business office; to Sr. Luiz Macedo, the popular stationer of No. 61 Rua da Qui-tunda, for samples of office and ornamental calendars; and to the agents of the Royal Insurance Co., Messrs. John Moore & Co., Masses were very generally celebrated for copies of a handsome illuminated calendar

Almanak Litterario e Estatistico do Ric commencention of the late Empress D. The Grande do Sul para 1897. Rio Grande : Carrera Christina.

— An ensign, son of Gen. Telles who was killed in the engagement on the island of Go.

sufficient testimony of its value. It is a compact little volume of 326 pages, plus some sixty odd pages of advertisements. A considerable part of the look is devoted to literary s part of the mook is devoted to interary serec-tions, among them many valuable sketches relating to the history of Rio Grande do Sul. contains an interesting description of the industrial establishments of the state

Consular Reports for Ortober and November. 1896. The special reports of United States consuls on commercial, industrial and other suportant questions published by the department of state.

Money and Prices in Foreign Countries. -Part 1. A series of reports upon the currency systems of various nations in their relation to prices of commodities and wages of lahor. st valuable compilation for all students of financial questions, for which the department of state of the United States government should receive the fullest credit,

Business Notes

- -The state government of São Panlo has accepted the tender of Messrs, Schmidt & Trost for the delivery of 10,000 barrels of Portland cement for the sanitary works of that
- It is stated that Luiz Tarquinio declines to be a member of the committee for revising the statutes of the Banco da Republica. In our opinion he is quite right. A serious businan can not afford to waste time with a political commission.
- -The government has appointed Drs. Affonso Penna, Serzedello Corrêa, Semitor Coe-lho Rodrigues, Luiz Martius do Amaral and Luiz Tarquinio as a commission to study ar cor ganization of the Banco da Republica. The shareholders appear to have nothing to say in the matter. The commission mentioned com-prises two lawyers, one military officer, one banker and one merchant.
- The Jornal do Commercio of the 1st inst, publishes a report that the printing-office connected with the Central railway is to be given up. It has been demonstrated, apparently, up. It has been demonstrated, apparently, that the administration of a railway can not rm a multiplicity of industries merely for the purpose of providing its own supplies. The work can be done much cheaper outside. On the 2nd an order from the director appeared elegions the office. closing the office.
- -A curious mistake occurred some time ago on one of the stemacrs running between this port and New York. Through some inexplic able carelessness two mail lags were left in ande carciessiess two man rags were left in the hold covered up with debris. Cargo was taken in and the steamer returned to Brazil. Here the work of discharging and receiving cargo did not disclose the missing bags, and it was only after the steamer's return to New York, when a thorough search was made by the authorities, that the missing mail-bays were discovered. They contained important business letters about which many inquiries had been made.

In October last the Times correspondent and the editor of this paper were grossly almsed for calling attention to the crisis in this market. They were accused of exaggeration and of enmity to the country, and their expulsion from Brazil was demanded. We now have much pleasure in calling attention to the New Year's message of the Vice-President. He assumed power a little later on, of which time he says: "I was called to occupy this past in one of the most difficult periods through which the government of Brazil has ever passed, a He then adds: The country had reached the acutest stage of a financial and commercial risis, whose solution had been postponed for four years by means of artificial and delusive expedients.» This is an unexpected confirmation of our statements, and we take much pleasure in referring it to those — especially the director of the fornal do Commercio—who occused us of exaggeration and hostility to the No same man will now doubt the accountry. curacy of our statements.

FINANCIAL NOTES

- The total receipts of the Paramagná cus toni-house in 1896 were 1,505,235\$228, against 1,634,397\$884 in 1895.
- The total receipts of the Bahia custom house in 1896 were 20,800,240\$,29, against (8,439,195\360 in 1895.
- The Santos customs returns for the six unnths and year cuding 31st December last, compared with 1895, were us follows:
- Compared with (25) 1895 1895 Six months. . . 23,216,37,35068 21,527,589\$136 Twelve months 47,203,849\$728 41,146,709\$574
- The Vice-President's demunciation of the excessive issue of paper money reads well and is unquestionably sound. But, if he really believes what he says, why did he issue those So,000 contos in substitution of cedulas? There seems to be inconsistency somewhere in this
- The customs receipts for the just month, according to the published returns, were as

	1896	1895
Rio de Janeiro,		9,447,811,5027

distributed in gold on the street, and the Bolsa closed without buyers or sellers.

December 20. — The banks opened at \$400, which the Londion & Rivor Plate advanced to \$50, during the afternoon. In the morating banks sterling was reported at \$15/52, but other paper found money at \$55, for all January delivery. Then bills were freely offered, and rates advanced mittle \$50, was done in bank and \$51, for in other sterling, after which money appeared, and the banks refused to draw at \$40/60 and other bills were readily placed at \$50, but just before the close bank sterling was again \$50/60. The form the round amounts, at \$50/60, and treety all \$50/60. The form the close bank sterling was again \$10/60. The form the close bank sterling was again \$10/60. The form the close bank sterling was again \$10/60. The form the course of the market was quite incomprehensible, but the close was certainly firm. Swithdramding the finctuations in rates, the bankings do not was small at the declared extreme of \$2/66-3 for bank, and \$50/60. The was all there was no Bolsa, to-day being election day for Deputies

pecember it. — There was very little animation, and the market, flathared at the close. The Breistliansische Runk poeted \$\frac{1}{2}\kleigt and the closes. The Breistliansische Runk poeted \$\frac{1}{2}\kleigt and the closes \$\frac{1}{2}\line{6}\line{6}\line{1}\

doing in gold.

January 2.—The market opened steady with 8 %, posted, and one, at least, of the foreign bruks drawing at 8% as considered the rate for other sterling. Refore refelock, however, there was a sharp denaund for bills, at 8 (1)16, and the banks weakened, drawing cautiously at 8%. Later the London and River Plate Bank posted 5 (6)6, at which it furnished bills, for good money, during the after moon, but other bills were in demmad at 8%, and at the close 8% was the best to be had for bank and business was reported in other sterling at 8-3/6. Although there were said to be no connected builts a good deal of movement was reported in the sterling at 8-3/6. Striffs for other sterling. Susperigus were quoted on the street at 25-60, and the holds closed with buyers in 2550, select at 15/6.

out the street at 27,500, and the hoise closed with buyers at 27,500, sellers at 27,500.

Jaimary 4.—The foreign banks opened at 8.45, sopen to offersa, and business was reported in bank ster ling at 8 at 15. During the morning the attempt the partial of the property of

MARKET REPORT.

Reads fancis ofth January Con

Exports.

Coffee.—There has naturally been but little animation in the market, and the sales reported for the week only stiently exceed also along has the dealer and factores have shown firmness all along an orders have generally made no changes in quoting Receives here have shown a great decrease

which, if partly due to the holiday season, may be confidently ascribed to the reduction in stocks in the interior, and although the present week is not unlikely to show some increase in the supply, we apprehend that the stocks in the Brazilian markets are houseforward to decrease stendily, and, as a lower exchange market is more than hinted at, some advance in currency quotations seems almost inevitable. The trade here increase, as hopeful of higher markets abroad with the turn of the year

year.

The market opened on the 28th nit, with (\$\frac{2}{2}\sigma_{2}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{2}\sigma_{1}^{2}\sigma_{2}^{

Imports.

Imports.

It is rather early to expect any improvement in the markets, but there certainly appears to be a rather more hopeful feeling. Receipts of thore have been moderate, and American importers are firm, but the demand is still said to run upon total utility hours, but the demand is still said to run upon total utility hours, but the demand is still said to run upon total utility have all important and the market close of firm all around 1. Lardy ports and estilish are all run changed, while rice is higher. The pine markets show in great changes and the only receipts are a large cargo of Sprince, which was sold on private terms. You changes are reported in the kerosene, timpetitine and room, but the second grelse of Frank comest are rather lower Indian corn his advanced charply under unifavourable meass regarding the crops in the River Plate. Brain and hay treadsout where we left them had week. By hange has been an almost constant demand for bills, presumably about stock, but there been for logidation purposes and the bank are still unwilling disawers when this money appoint. There has been inthe domand for bills seems still very medicate.
